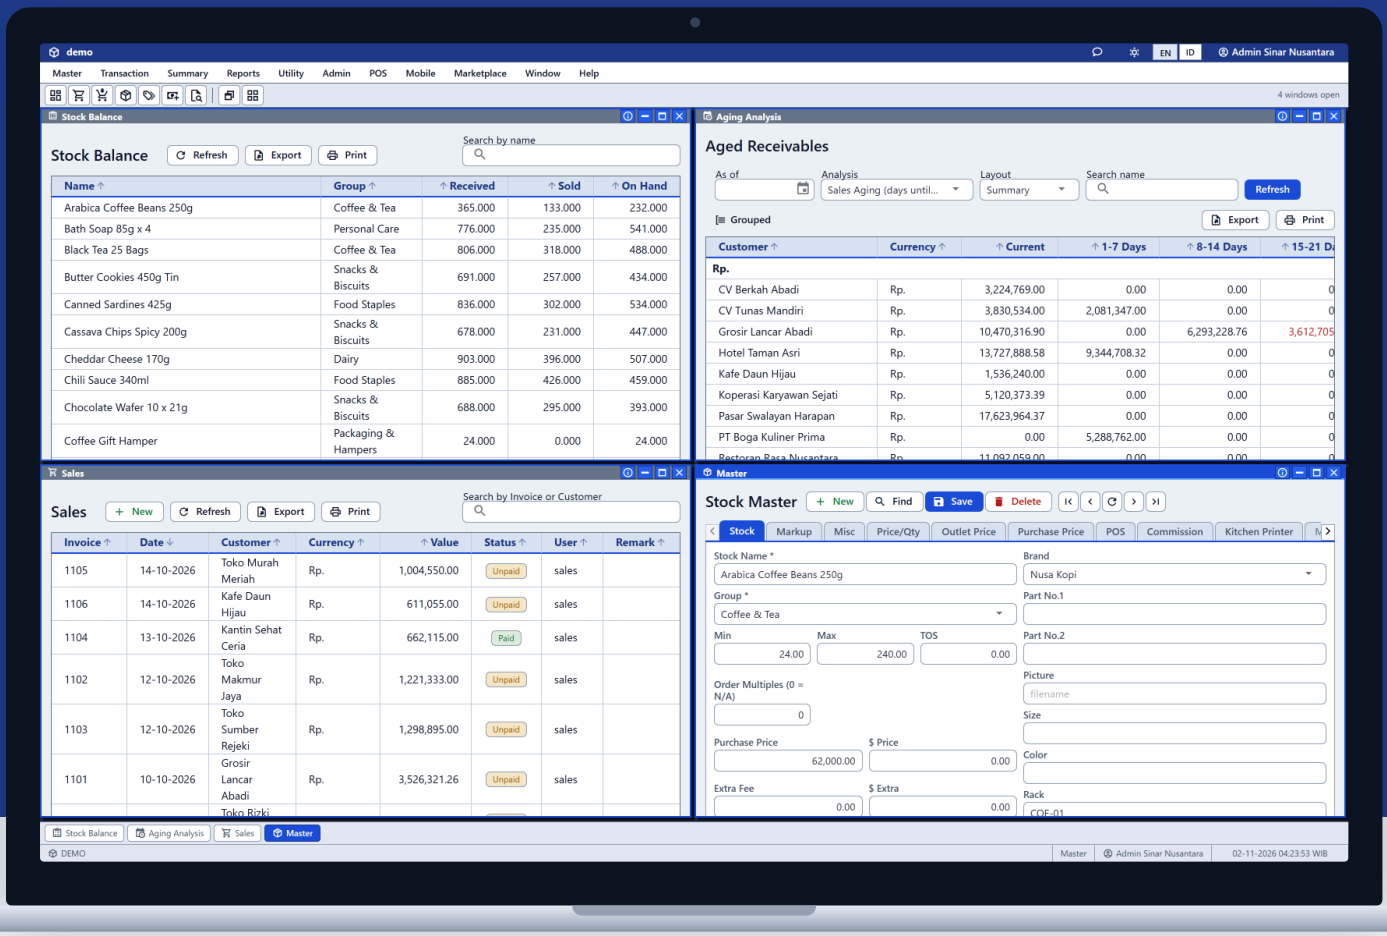
program.id

SALES · STOCK · PURCHASING

Sales, stock and purchasing in one system, in the cloud.

program.id gives your company its own web address. Your team signs in from any computer, and every branch works on the same numbers.



Nothing to install

Open yourcompany.program.id, or your own domain, in a browser at the office, a branch or home.

One set of numbers

Every branch saves into the same database. No syncing, no end-of-day uploads.

Safe in the cloud

Encrypted connections, and your data private to your company.

SOUND FAMILIAR?

Growing businesses outgrow spreadsheets and office-bound software.

When sales, stock and money live in different places, every question takes a phone call and every month-end takes a week. program.id keeps them in one place.

BEFORE

Spreadsheets that never agree

Stock is in one file, sales in another, and nobody is sure which one is right.

Software tied to one office PC

The system only works at the office, so branches send files and wait.

Margins nobody can see

You know what you sold, but not what you actually earned on it.

Payments chased from memory

Which invoices are overdue, and by how much, depends on who you ask.

WITH PROGRAM.ID

One set of numbers

Every sale, purchase and transfer updates the same stock and the same balances.

Open it from anywhere

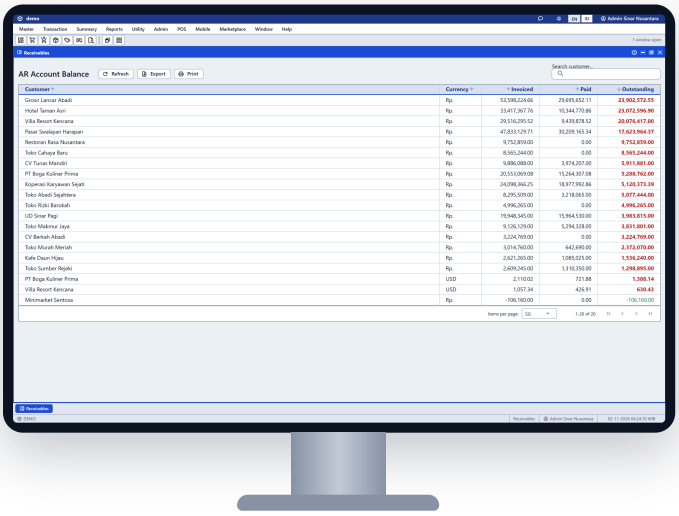
Any modern browser, at your own company address. Branches see the same data as head office.

Profit on every item

Sales less the real cost of the goods, with the margin worked out for you.

Know who owes what

Outstanding invoices and aging for every customer and supplier, per currency.



AT A GLANCE

Who owes what, per customer and currency.

Receivables shows what each customer was invoiced, what they paid and what is still open. Rupiah and US dollars are kept apart, never converted.

BUILT FOR

Distributors and wholesalers · Shops and retail chains · Small manufacturers · Consignment sellers · Importers and traders · Companies with several branches

ONE SYSTEM

Everything from the first quote to the last payment.

The modules share one database, so a delivery note, an invoice and a payment are three steps of the same story, not three separate files.

Sales

Quotations, sales orders, delivery notes, invoices and returns, plus Coretax files for the tax office.

Purchasing

Purchase requests, purchase orders, goods received, supplier invoices and returns.

Inventory

Price levels per unit, several warehouses, transfers and serial numbers.

Stock taking

Full or selective counts with a barcode scanner, and the differences posted for you.

Consignment

Goods placed at a customer, what sold, and what came back.

Production

Raw materials in, finished goods out, with the cost carried across.

Payments

Six ways to pay, down payments, and debit and credit notes.

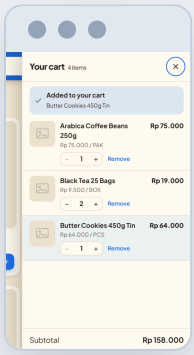
Salesman commission

Flat rates, or rates tied to how fast invoices are paid.

Reports

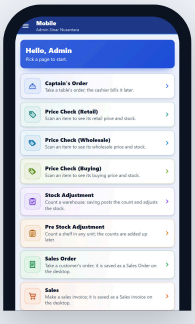
Sales, profit, stock, receivables and payables, ready to print or export.

BEYOND THE OFFICE



Marketplace

An add-on: your own web shop at yourcompany.shop.program.id or on your own domain. Each order arrives as a Sales Order, and shoppers can track it and chat with you.



Mobile

An add-on, with no app to install: price checks, stock counts with the camera, sales orders and invoices, POS sales, reports and shop chats. The pages follow your plan; Captain's Order comes with the POS.

180+
reports across sales, purchasing, stock, POS and money

50
printed documents, from invoices to stock-take sheets

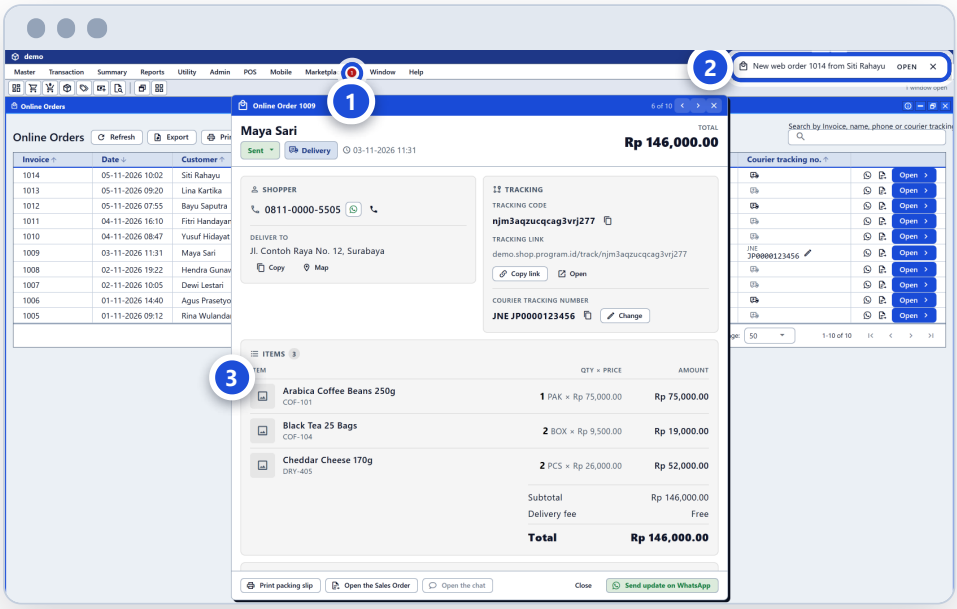
1,500+
improvements since May 2026, and counting

2
languages, English and Bahasa Indonesia

YOUR OWN WEB SHOP

Sell online, and serve every web order from the same system.

With the Marketplace add-on your company gets its own web shop, at yourcompany.shop.program.id or on a domain of your own. An order arrives as a Sales Order, and the office knows at once.



Online Orders, with a new order just in and order 1009 open in its own window.

1 A count on the menu.
Marketplace shows how many web orders nobody has started on yet.

2 A notice as it arrives.
"New web order 1014 from Siti Rahayu" shows in the corner. Click it to open Online Orders.

3 One window per order.
Shopper, items, delivery fee, courier and No. Resi, and history. Print a packing slip or send a WhatsApp update.

An invoice or the till
Copy the Sales Order into a sales invoice, or take it into the POS till once the transfer is in. Paying marks it Sent.

Courier and No. Resi
The shopper sees the courier and tracking number on the tracking page, and your WhatsApp update carries them too.

A simple checkout
One flat delivery fee, or free delivery, and a country list in front of the phone number.

Your shop, your look
Your logo, colour and banners, an A4 poster with your QR code, and Upload photos for many photos at once.

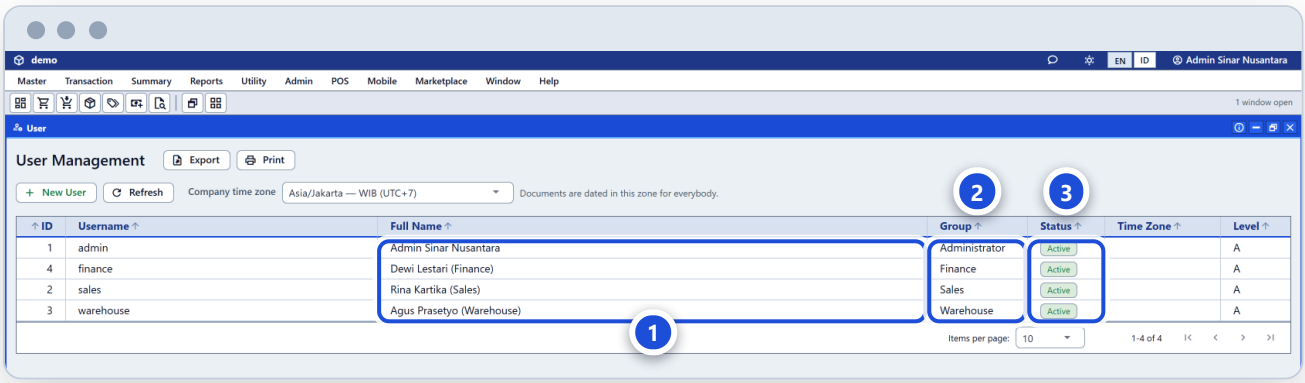
Easy to shop
Sort by recommended, best selling, price or name, show only what is in stock, and Order again. Shared links show a preview.

Online Sales Summary
Web orders per day, week or month, the net value and the best sellers.

EVERYONE, AT ONCE

Every branch on the same numbers.

There is one database, not a copy per office. A sale saved at a branch is in head office's reports the moment it is saved.



User Management: your team, each with their own sign-in.

1. **A whole team at work.**
   Sales, warehouse and finance each sign in under their own name.
2. **Each in their own group.**
   A group decides which menus and buttons its people get.
3. **Someone leaves?**
   Set them to Inactive and they can no longer sign in.

- **No syncing.** Branches, warehouses and head office read and write the same data.
- **Your open windows keep up.** Save an invoice or a payment and open lists update themselves, along with the PAID mark: on your screen at once, on your colleagues' within about 15 seconds.
- **New customers show up for everyone.** A customer or supplier a colleague adds appears in your lists and dropdowns within about 15 seconds.
- **No clashing numbers.** Two people saving at the same moment never get the same invoice number.
- **Every save is signed.** Each person signs in as themselves, so every document records who saved it.

1
database for every branch, warehouse and office

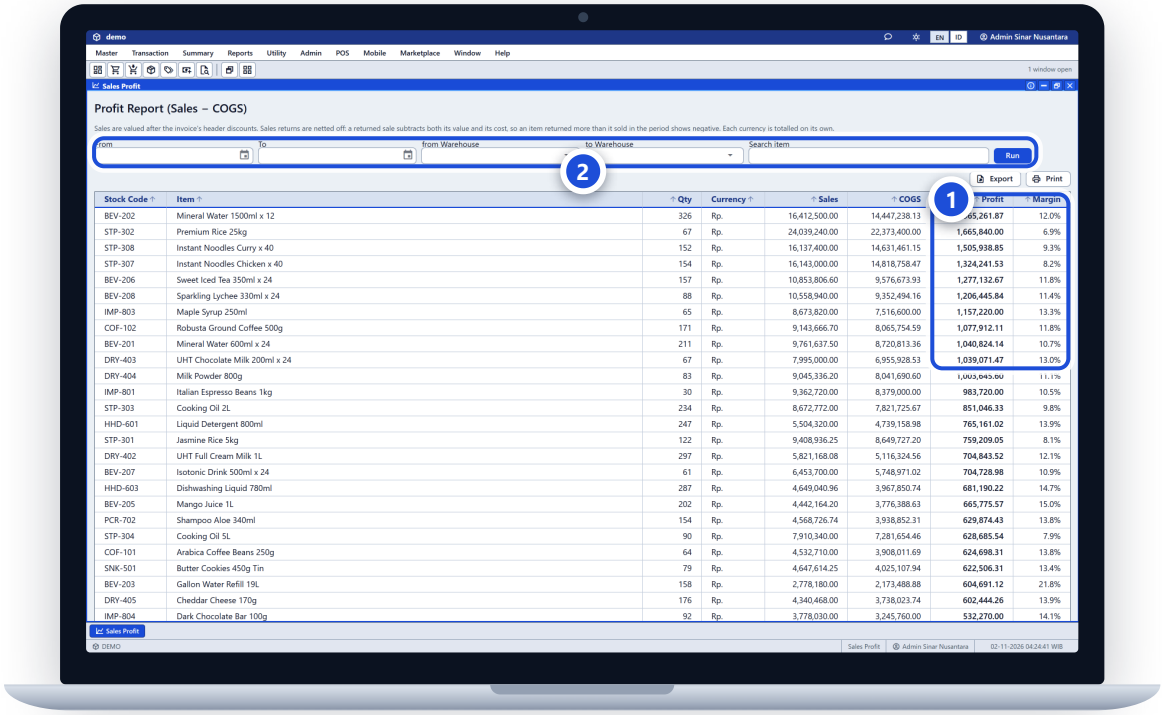
0
end-of-day uploads or files sent between branches

No clashes
two people saving at once never get the same invoice number

PROFIT AND STOCK

See what you really earn, and what to order next.

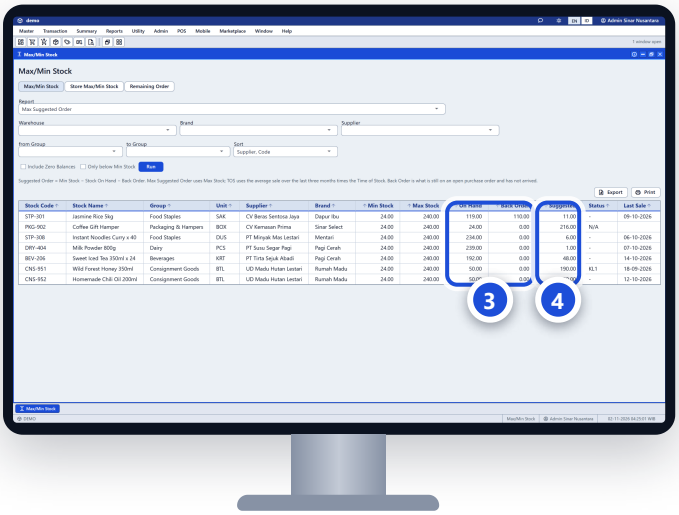
Profit is worked out from what each item actually cost you, not from a price list. The reorder report then tells you how much to buy, after counting what is already on order.



Profit Report: sales less cost of goods, best earners first.

1 Profit and margin per item.
Sales less the cost of the goods sold, best earners first.

2 Any period.
Pick the dates, run it, then export or print.



REORDERING

Order what you need, not what you guess.

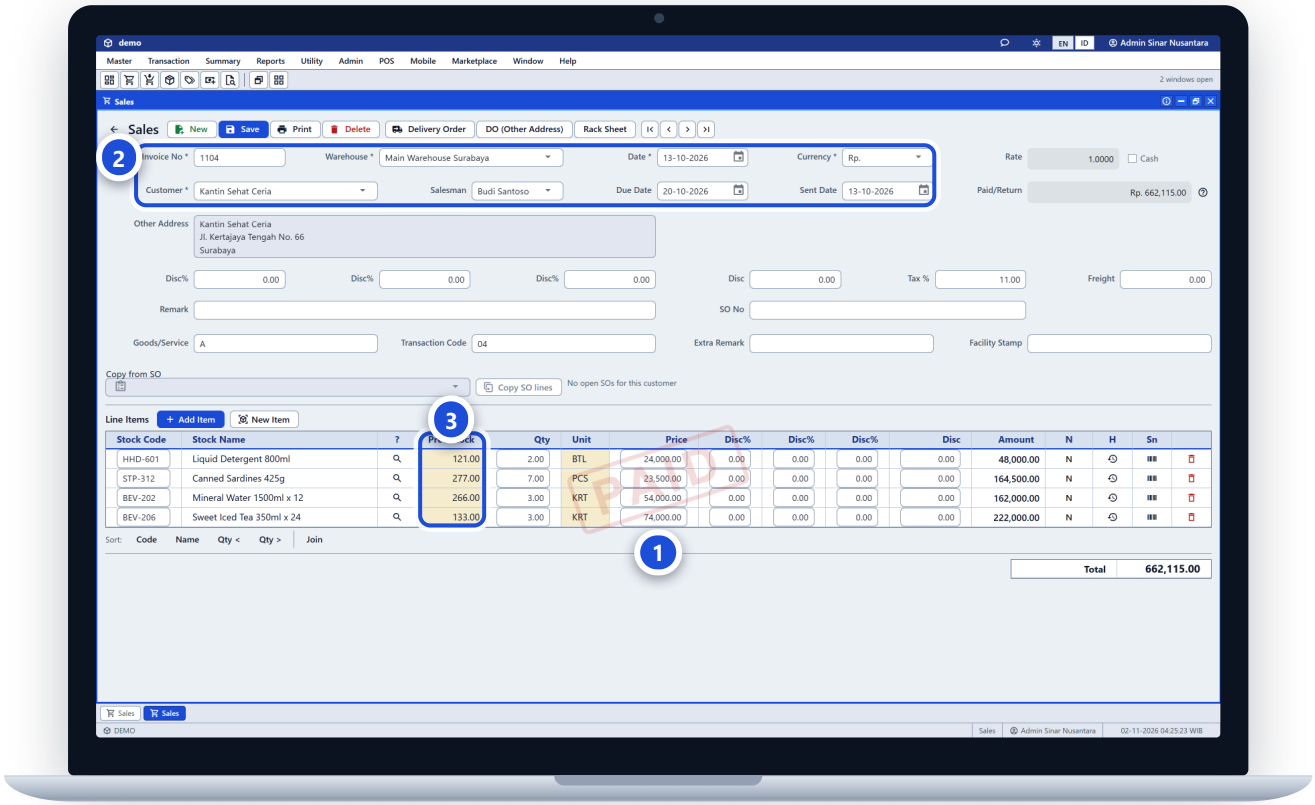
3 On hand and on order.
Stock in the warehouse plus purchase orders not yet received.

4 Suggested quantity.
Up to each item's maximum, or from its average sales.

HARD TO GET WRONG

Mistakes are stopped before they are saved.

The rules your best staff follow by habit are built into every invoice, so a new hire cannot break them.



A paid sales invoice.

1. **Paid means locked.**
   A paid invoice is stamped PAID and cannot be deleted.
2. **Header first.**
   No lines until customer, warehouse, date and currency are filled in.
3. **Stock in view.**
   Each line shows what is on hand, and selling beyond it is flagged.

- ✓ **Credit limits.** A customer already over their limit cannot buy on credit.
- ✓ **No selling below cost** or below the purchase price, on every item or only the ones you choose. Only an administrator can approve an exception.
- ✓ **Closed periods stay closed.** Lock entries before a date, per warehouse, and catch dates far from today.
- ✓ **Access by user group.** Hide menus, whole branches, or single buttons such as Delete and Print.
- ✓ **History on every line.** Past prices, who changed a price, and who saved each invoice.

YOUR DATABASE IN THE CLOUD

Your data lives in the cloud, not on a PC in the back office.

There is no server to buy and nothing to install. Your team reaches the same data from the office, a branch, the warehouse or home.

Nothing in the office to look after

The program and your data are kept online for you. Your team only needs a browser.

Encrypted on the way

Every page and every save travels over an encrypted HTTPS connection.

Private to your company

Your data sits in its own section of the database, reached only through your own address and your own team's sign-ins.

Passwords kept safe

Stored only as one-way hashes, never as readable text.

Any computer with a browser

At the office, a branch, the warehouse or home. Nothing to set up on each computer.

Updates arrive by themselves

Nothing to install. Improvements appear on their own, and What's new says what changed.

Backed up every day

Your data is copied every day, with nothing for you to do.

Your data, your way

Export any list or report to Excel, CSV or PDF whenever you need it.

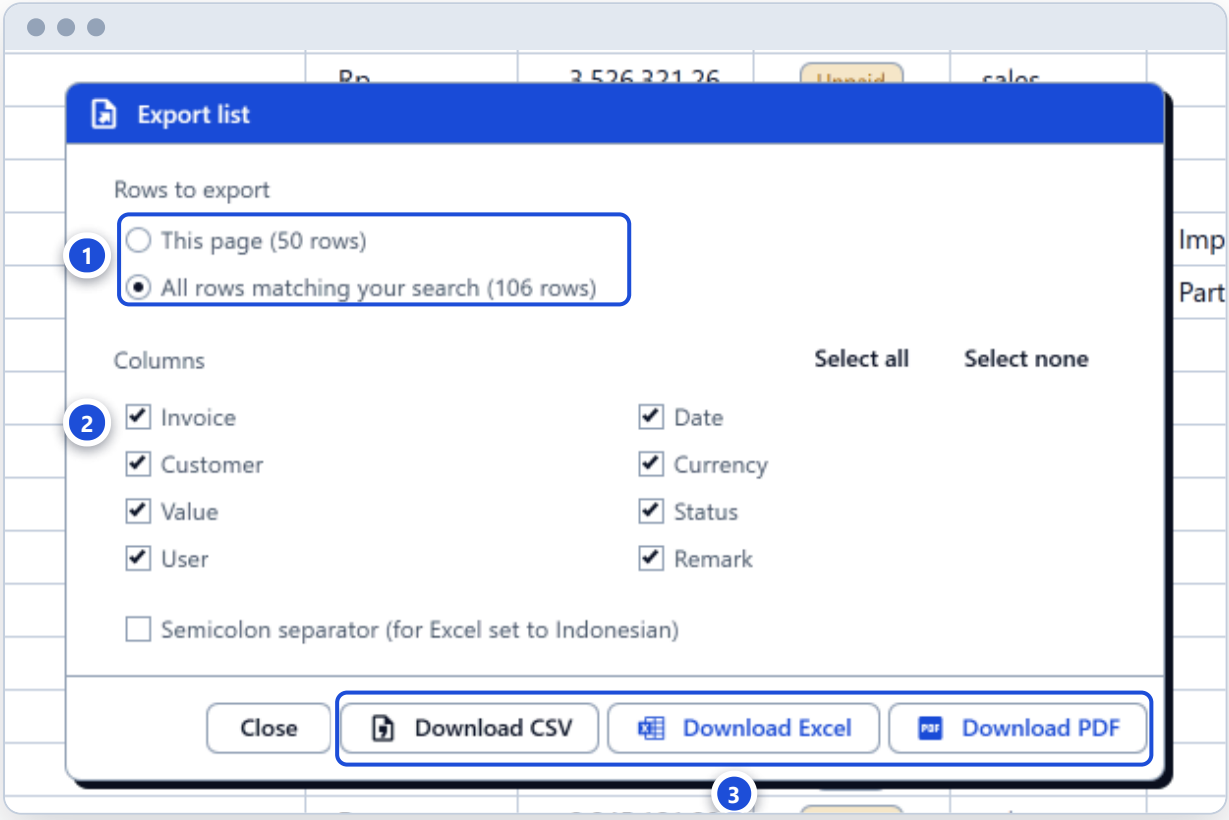
YOUR DATA, YOUR WAY

Bring your history in. Take your data out any time.

Moving from ISX desktop

We load your existing ISX database for you.

- It is checked against the expected layout before anything is written.
- It loads in one go: either everything arrives, or nothing changes.
- Your program.id sign-ins stay as they are.



Export, from any list or report.

1 **This page or everything.**
The rows on screen, or every row that matches your search.

2 **Pick the columns.**
Tick only what you need.

3 **Excel, CSV or PDF.**
In the format your accountant asks for.

Print any list

Every list and report also prints as a clean page.

Up to 20,000 rows at a time

A larger export stops at 20,000 rows and tells you so.

ACROSS INDONESIA

Help near you.

Our dealers across Indonesia install, train and support. Call the one nearest you.

The current list of dealers is always on program.id.

SEE IT FOR YOURSELF

Ask for a walkthrough of program.id.

Visit program.id to arrange a walkthrough. We will show you the screens in this brochure.

GETTING STARTED

Up and running in three steps.

1

Get your address

We set up yourcompany.program.id for you, or your own domain, and can give the program your logo, colours and banner picture.

2

Bring your data

Already on ISX desktop? We load your existing ISX data for you, checked before anything is written.

3

Go live

Your team signs in from any computer with a browser, and starts work.
